Becker Marine Systems – exhibition preview 2011

Becker Marine Systems will be representing their company at several exhibitions this year (see **Picture 1**), where visitors can experience presentations on the company's wide product range comprising amongst others of the Twisted Rudder TLKSR® and Twisted Flap Rudder TLFKSR, the Schilling® KSR Rudder and of course the best-selling Becker Mewis Duct®. The latter is now established in the market of energy-saving devices for the shipbuilding industry and indicates Becker Marine Systems' continuous effort to further strengthen its position as leading supplier of environmentally-friendly product solutions for the maritime industry. A full scale Becker Mewis Duct® will be on display in front of the exhibition hall at the Kormarine in Korea. After the exhibition, this specific Becker Mewis Duct® is going to be installed on its designated vessel.

Advantages of the Becker Mewis Duct®:

- Fuel saving in average 6 %
- Reduction of NO_x and CO₂ emissions
- Suitable for newbuildings and retrofits
- Reduced vibrations and pressure pulses
- No moving parts, no service necessary
- Return on investment in about 1 year
- Installation time approximately 4 days

We are looking forward to meeting our clients and visitors and would be happy to give further information on our products at the exhibitions.
